

CART 470 - A SONG FOR MY MOTHER - Learning Contract

Thesis/ Project Focus

A Song for My Mother is a tapestry-of-ceramic-beads project that reflects the effects on Indigenous victims of forced adoption and institutionalized family separation. This project materializes survivors' voices by embedding sound into the work.

How do we design a system that stores people's voices through ceramics? *What does it truly mean for ceramic to remember a voice?*

Thesis/Project Outcome

Our mission is to prototype a device, object, or method for embedding those voices within the ceramic. From coding to electronics to 3D printing and sensors, multiple options are being considered to make this feasible.

Knowledge Base/Fields/ Domains/ Keywords

Sensors, survivors, storytelling, ceramic, voices, remembering, exploration,

Learning Objectives

Our goal is to experiment with sound as a medium and understand how to use it in a way in which we can embed voices into a ceramic tapestry. While combining our individual skills and strengths to convey the client's vision for their project, A Song for My Mother.

Learning Activities

Activity	Outcome
Design for 3D printing workshop (https://librarycalendar.concordia.ca/event/4030752)	Better insight into how the prototype could be done
Arduino workshop (https://librarycalendar.concordia.ca/event/4030744?more)	Seeing how an arduino could maybe fit into the project or be incorporated as a whole.
Interview/Talk with the client	Hear what the project and the song means to them. See and understand what their vision for the project is.
Visiting Nadia's Ceramic Shop	Better understanding of how the tapestry could look like and the material feel.
Research for similar projects (sound embedded to material)	Getting inspiration for bettering ideas and creating prototypes.
Prototyping with sound or sensors	Figuring out what works best by testing multiple methods.

MILESTONES

Milestone #1

Coming up with three concrete ideas. (Sep 30th)

Milestone #2

Deciding on a final idea and starting the prototype. (Oct 7)

Milestone #3

Final prototype (Nov 25)

Weekly Plan

WEEK	PLAN	DETAIL (Make sure these are measurable and quantifiable)	WORK DUE (*Reflections are due every week)
4 - Sept 30	Narrowing down ideas + Assign roles + know or have additional materials are needed	- 3 ideas (Milestone 1) - have arduino or raspberry pi if they will be used - meet with client	- 3 Ideas (Milestone 1)
5 - Oct 7	Final idea + start working	- developing initial plan and diving the workload - 3d design + measurements to be 3d printed (if needed)	- Deciding on a final idea and starting the prototype (Milestone 2)
6 - Oct 21	Prototyping	- Test and refine what we've worked on - Prepare ideas for presentation - Meet with client if needed - book 3D printer appointment to discuss project (IF needed)	
7 - Oct 28	Midterm presentation	Present a clear concept and process of the project - Ask for feedback -Submit 3D design to be printed	Midterm project checkin
8 - Nov 4	Work on prototype	- Make additional changes based on feedback	
9 - Nov 11	Work on prototype	- Test and refine what we have - Client approval	
10 - Nov 18	Work on prototype	- Tweaks	

11 - Nov 25	Final Prototype done	Finalized concept & time for adjustment	- Final Prototype (Milestone 3)
12 - Dec 2	Showcase
